

---

EXPERIENCE

---

**Software Engineer**

Sweden (Remote)

*Sendpilot**Sep 2025 – Present*

- Designed and built a Chrome extension that connects users' LinkedIn accounts to the platform, handling OAuth flow and messaging sync, now used by **over 500 users**.
- Engineered a **LinkedIn inbound automation** where keyword-triggered comments initiate automated replies and lead-magnet delivery, owning both the backend workflows and configuration UI; migrated the workflows to **Temporal** to improve reliability of long-running asynchronous automations.
- Rebuilt the **Unibox** messaging system end-to-end, cutting API response times from minutes to milliseconds, resolving core reliability issues and reducing infrastructure costs; also shipped content scheduling with attachments and improved **analytics** with custom date ranges and timezone support.

**Full Stack Developer Intern**

India (Remote)

*Exp.club**Oct 2024 – Nov 2025*

- Worked as the sole engineer, designing the database schema, building backend APIs, and developing the frontend using Next.js and Supabase, coordinating with the designer to take the platform from zero to live.
- Implemented an **AI-powered voice assistant** that simulates interviewees for user interview practice, integrating **LiveKit** and **Deepgram** for real-time voice interaction and speech processing, with post-interview analysis and feedback.

**Software Development Intern**

India (Remote)

*ReferSure**May 2025 – Jul 2025*

- Designed DynamoDB schemas, REST APIs and serverless pipelines using AWS Lambda and SQS for async processing on a referral-based job marketplace, with backend services in Spring Boot and infrastructure across S3, EC2, and Amplify
- Built a resume parsing pipeline using the Gemma model and structured prompting to automatically extract and match candidate information, while leading frontend development in Next.js and integrating backend services end-to-end.

---

PROJECTS

---

**Aarogyam** *Next.js, NGINX, Express.js, PostgreSQL, FastAPI, Pinecone, LlamaIndex* 

- Developed a healthcare platform covering appointment booking, medical record management, and medication tracking across multiple user roles.
- Integrated an AI-driven healthcare support system utilizing Llama 3-70b-instruct, Pinecone, and LlamaIndex, achieving **94%** retrieval accuracy and **90%** alignment with clinical recommendations.

**JobScrape360** *Flask, Beautiful Soup, Selenium, PostgreSQL* 

- Developed a job search automation tool that scrapes listings from **3 sources**, reducing manual search time by **80%**.
- Collected and stored **over 1000** job listings in PostgreSQL, enabling efficient querying and filtering.

---

TECHNICAL SKILLS

---

**Languages:** Java, Python, JavaScript, TypeScript, SQL**Frameworks:** Spring Boot, Express.js, React.js, Next.js, Nest.js, Flask, FastAPI**Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, Pinecone**Cloud & Infra:** AWS (Lambda, SQS, S3, EC2, Amplify, Cognito, RDS), Azure, Temporal, NGINX**Tools:** Git, Prisma, LlamaIndex, Postman, Supabase

---

TECHNICAL ACHIEVEMENTS

---

**Top 10 at OdoO Hackathon 2025** (19,000+ participants). Led full-stack development of Rent-It, a rental management platform with automated bookings, quotation system, and payment integration.

---

EDUCATION

---

**LJ Institute of Engineering and Technology**

Ahmedabad, India

*Bachelor of Engineering (B.E.) in Computer Science and Technology; CGPA 9.05/10**2022 - 2026*
